

## iResponse Classroom Responder System

### iResponse App

Located on the participant's iPhone or iPod touch and allows students to respond to questions submitted by the instructors using the iResponse Utility.

### iResponse Utility

Allows instructors to formulate and send questions at any time directly to participant's iPhone or iPod touch devices from the instructor's desktop computer.

Transmit test questions simultaneously and at any time during a class session to all iPhone and iPod touch devices connected to the class session via Wi-Fi.

Instant feedback on the instructor's computer including who is connected, responses, and averages.

The iResponse system provides educational and training institutions with the ability to use the iPhone and iPod touch to turn their lectures into an interactive learning experience in order to help students increase their learning and retain more knowledge from each teaching session.

The iResponse system is comprised of two components: the iResponse Utility (downloaded by the Instructor) and the iResponse iPhone/iPod Touch Application (downloaded by the student).

### iResponse Utility\*

The iResponse Utility component allows an instructor to test his/her students' comprehension at any point during the teaching session. The instructor may develop questions on their desktop computer at any point in the teaching session and then immediately transmit the questions directly to the students' iPhone/iPod touch devices. The instructor is also able to view who is connected to the system, who has responded to the question, and what response was given (both individually and as a group).

The responses are then displayed on a graph (either to the entire class or just the instructor) showing the correct response and the number of students who answered the question correctly. In addition, the instructor may also view and save the results of the questions and answers by teaching session, individual student, or specific question.

### iResponse iPhone/iPod Touch Application

The iResponse iPhone/iPod Touch Application component works in conjunction with the iResponse Utility and allows the students to respond to and participate in the question and answer session. Thus, the iResponse iPhone/iPod Touch Application is downloaded by the student and is required for all participants in the training session. By using this component, students are able to log-in to the question and answer session, respond to questions, view their individual progress, and view their class's overall progress. The application enables the user to receive and display multiple choice, true/false, yes/no, and survey style questions transmitted by the iResponse Utility.

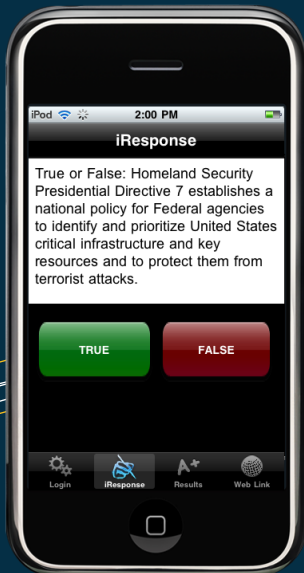

\*Available for both the Mac and PC.

Providing Mobile Training Solutions

## How it works

The **iResponse Utility** is comprised of 4 screens:

**iResponse Connect Screen:**  
Used to create the class ID, session name and view devices connected to the testing session.

**iResponse Questions Screen:**  
Used to create the list of questions and answers, select the question type, determine feedback status, and transmit the question and answer to the connected devices.

**iResponse Answers Screen:**  
Used to view the respondents answers in a bar graph format, with an option to highlight the correct answers.

**iResponse Statistics:**  
Enables the user to view the analytical data of the session, including class performance and student performance that may be further sorted by question or individual. This data may be saved/exported in an xml format.
